# testing some scripting

## doesnt look very nice in block

```
1 // you can iterate over arrays using (let ... of
  [array]):
2 let l = ['a', 'b', 'a', 'b', 'c']
3 for (let item of l) {
4     console.log(item);
5 }
6 // but watch out!
7 for (let item in l) {
8     console.log(item);
9 } // output: 0 1 2 3 4
```

# testing some more scripting

Looks better like this

```
1 // you can iterate over arrays using (let ... of
  [array]):
2 let l = ['a', 'b', 'a', 'b', 'c']
3 for (let item of l) {
4     console.log(item);
5 }
6 // but watch out!
7 for (let item in l) {
8     console.log(item);
9 } // output: 0 1 2 3 4
```

# and some more code

And like this

```
1 // you can iterate over arrays using (let ... of
  [array]):
2 let l = ['a', 'b', 'a', 'b', 'c']
3 for (let item of l) {
4     console.log(item);
5 }
6 // but watch out!
7 for (let item in l) {
8     console.log(item);
9 } // output: 0 1 2 3 4
```

# A quote

*Reporting bias is the tendency for speakers to omit unnecessary or obvious information while mentioning things they consider relevant or surprising.*

Bladsjö and Muñoz Sánchez (2025, p.1)

# Some math

here's some very impressive math:

$$PPL(W) = \exp \left( - \frac{1}{|W|} \sum_{i \leq |W|} \mathbb{P}(W_i | W_{<i}) \right)$$

(it's just perplexity)

Thank you for listening!
